**Page 12-14: Legal Notes, Disclaimer, Imprint**

### **Comment Ringler Research:**

On October 27, 2017, the largest listed uranium producer Cameco surprised with a net loss of \$ 124 million for the third quarter of 2017. The main reason for the losses were impairments. However, the company expects the operating cash flows from 2016 (312 million USD) to be exceeded in this current calendar year. The share price closed in a volatile trading session with a loss of 6% compared to the previous closing day. The stock is trading also near the 52-week lows of early November 2016, which was at USD 7.41. The company announced a reduction in expected uranium production to 24 million pounds in 2017 from previously scheduled 25.1 million pounds.

Even if the start of the next uranium bull market does not yet appear to be imminent, the medium to long term prospects for the sector are outstanding! 449 reactors in 30 countries are currently in operation.

In addition, there are 57 reactors in the construction phase, which will lead to an increase in demand for uranium from the reactor operators. The possible weakness in the North American tax loss-selling season might be a good entry point to pick up companies with excellent projects, which will be valued 10-20x higher in the next uranium bull market! We expect that bull market to start at latest in 1.5 to 3 years from now, at a time when the utilities rush to secure long-term delivery contracts.

**According to statistics from the ‘World Nuclear Association’, the three countries of Kazakhstan, Canada and Australia were responsible for 2/3 of the world mine supply of uranium. Kazakhstan is by far the biggest producer worldwide, with a 39% market share. Therefore, the output reduction of 10% by the beginning of 2017 had a great influence on the uranium sector, especially the spot uranium market.**

**Overview of the main countries, which produce uranium (year 2016):**

<b>1. Kazakhstan:</b>	<b>24,575 tonnes U</b>
<b>2. Canada:</b>	<b>14,039 tonnes U</b>
<b>3. Australia:</b>	<b>6,315 tonnes U</b>
<b>4. Niger:</b>	<b>3,479 tonnes U</b>
<b>5. Namibia:</b>	<b>3,654 tonnes U</b>
<b>6. Russia:</b>	<b>3,004 tonnes U</b>
<b>7. Usbekistan:</b>	<b>2,404 tonnes U</b>
<b>8. China:</b>	<b>1,616 tonnes U</b>
<b>9. USA:</b>	<b>1,125 tonnes U</b>

**The uranium sector is still in a longer bottoming formation – Also, turnovers in this sector ETF declined again sharply in recent months.**

**Cameco is still in a downtrend - if the 52-week lows hold at around 7.20 USD, a counter-cyclical long entry might be an interesting around an (confirmed) double-bottom.**

**UEC can not (yet) escaped from the overall market trend. A test of the support zone between 0,81 and 0,94 USD could offer a very attractive entry point for anticyclical investors!**

**Energy Fuels is currently testing the 52 week lows from November 2016 - next week, the release of earnings for the third quarter 2017 is expected.**

The distribution of this document and the information contained therein to persons resident in countries other than the Federal Republic of Germany, Switzerland and Austria may be restricted by law, and persons into whose possession this document comes should obtain information about and observe any such restrictions, if any. Any failure to comply with this restriction may constitute a violation of Canadian securities laws or those of the US or the laws of another country.

The object of this newsletter could include companies which are engaged in a risky market. Capital investments of any kind, including those in shares in high-risk markets, such as mining companies, are also exposed to some significant risks or even a total loss. The object of this newsletter could be stocks and financial products which have a low market capitalization. Especially for companies with a low market capitalization, investors must often expect a high volatility and/or low market liquidity. The object of this newsletter / document could involve stocks, financial products, indices and commodities which could be associated with major price risks and is therefore unsuitable for inexperienced or risk-averse investors. This is especially true for all Over The Counter (OTC), i.e. the so-called outside of a monitored stock exchange or a regulated market. The same applies to shares that are traded on the Australian Stock Exchange (ASX), on Canadian stock exchanges (i.e. Toronto or Vancouver) or on the Alternative Investment Market (AIM), a segment of the London Stock Exchange. The bespoke shares and financial instruments are frequently traded on any of these markets in which they are segments of the highest risk category. Instruments which are traded there, are threatened at any time by the possibility of a total loss, high volatility and the possibility of reduced liquidity and marketability in particular due to low trading volumes. High price opportunities are faced with enormous risks. All of the information contained in this newsletter / document neither constitutes a solicitation nor an offer to sell or purchase any investment or for making other transactions. It is not also not a recommendation as part of investment advice. Any forecasts or opinions expressed reflect the personal, subjective and current views of the publisher and are for guidance and information only. This newsletter / document does not take into account particular investment objectives, the financial situation or the particular needs of individual users. The securities, financial instruments, indices and commodities presented in this newsletter / document may not be suitable as an investment instrument for every user. This newsletter / document contains only a non-binding opinion of the investment instruments and market conditions at the time of publication of the document. All assessments of bespoke companies, financial instruments and commodities, in particular price targets, may change without prior notice. No guarantee is given for the correctness of the charts, prices, data and information on the commodity, foreign exchange, interest rate and stock markets presented in the newsletter / document. All data and information obtained are from sources the publisher considers to be trustworthy and reliable at the time of the preparation. Despite all due care and attention in the preparation of the newsletter / document the publisher / the author assumes no liability or responsibility whatsoever for the correctness, completeness and accuracy of the information contained in the newsletter / document and for losses that could arise from any errors, omissions or inaccuracies. Liability claims against Ringler Consulting and Research GmbH or the author which refer to damages of a material or immaterial nature caused by use or disuse of information are generally excluded, unless it is due to intentional or grossly negligent behavior by the author or Ringler Consulting and Research GmbH. In particular, Ringler Consulting and Research GmbH does not guarantee that said projections prove to be accurate, or that price targets / possible future company values will be reached. Furthermore, neither this newsletter / document nor the information contained in it form the basis for any contract or obligation of any kind. Neither by downloading the document nor from the information contained in the document does a broking or investment advisory agreement with Ringler Consulting and Research GmbH come into being. Neither Ringler Consulting and Research GmbH nor the author are registered financial or investment advisors. Any investment decision should therefore take place after previous consultation with a professional investment advisor as well as personal research, for example, all informations published by the bespoke companies. All statements expressed in this newsletter / document should be construed to be forward-looking statements that involve substantial risks and could not be true. The positive performance of a financial product in the past can in no way be an indication of future performance. This newsletter / document, including all of its parts are protected by copyright. Any use outside of the narrow limits set by copyright law is not permitted without the consent of Ringler Consulting and Research GmbH. This is particularly true for copying, microfilming, translating and storing, distributing and processing in electronic systems.

**Information pursuant to Section § 34b of the German Securities Trading Act [WpHG] and to Regulation (EU) No 596/2014 of the European Parliament and of the Council of April 16, 2014, on market abuse (market abuse regulation) (as of 29.10.2017)**

Ringler Consulting and Research GmbH or employees of the Company may at any time conduct buy or sell transactions in the shares of the featured companies (i.e. long or short positions). This also applies to options and derivatives, based on these securities. Those transactions may affect the respective company's stock price under certain circumstances. Published information on the "web pages", the newsletter or the Ringler Research Reports, recommendations, interviews and company presentations are paid by the respective company or third party (so-called "third parties"). The "third parties" include, for example, Investor Relations, Public Relations, Brokers and Investors. Ringler Consulting and Research GmbH may partly directly or indirectly pay for the preparation and electronic distribution and for other services discussed by the company or might be compensated with an allowance of a so-called "third party". Even if we create each analysis to the best of knowledge and belief and professional standards, we advise you to involve further external sources, such as your local bank or a consultant you trust regarding your investment decisions.
